

YAD SORAN TAWFEEQ

Software Enginner

PERSONAL DETAILS

Erbil, Iraq
yadkoyiii@gmail.com, 07512160200

SKILLS

Softskills

Dart, Flutter (Mobile Application)

HTML, CSS, Javascript (Front End)

Github, SQL, MySQL, PostGres (Backend)

Networking & Routing

Systems & Scripting

Monitoring & Security

Infrastructure & Virtualization

CISCO

Cloud Configuration

Java, Laravel, Python, C++, C#, Tailwind

Google Workplace Expert

MS Office Advanced

EDUCATION

Primary and Middle School

Cambridge International School - CISK

2010 - 2017

Highschool

Hawler Typical Secondary School - HTSS

2017 - 2021

University

University of Kurdistan Hewler - UKH

2021 - 2025

LANGUAGES

Kurdish

Arabic

English

INTERNSHIPS

Korek Telecom

Sep 2024

Fullstack Developer

- Using Spring Boot to create full fledged websites
- Developed enterprise internal applications utilizing Spring Boot and configured template integrations into telecommunication systems

Al-Hayat Co.

Web Developer

- Migrated static templates to dynamic Laravel environments with optimized routing systems and maintained backend system workflows
- Created reusable Blade components for improved code maintainability
- Established eff routing system for seamless user navigation

EMPLOYMENT

Link Data

Nov 2024 – Feb 2025

Full stack Developer & Cloud Technician

- Administered and supported servers, storage systems, and operating system environments.
- Configured core network topologies, routing parameters, and connectivity simulations utilizing **CISCO Packet Tracer**.
- Managed cloud-hosted server environments, ensuring secure deployment pipelines and reliable access.

Erbil Avenue – Alcove

Feb 2026 – Apr 2026

AV Engineer

- Designed, configured, and supported site-wide **Private Networks**, subnet structures, and local switching frameworks.
- Maintained integrated audio-visual routing frameworks and hardware configurations with focus on system reliability.

Arena Erbil

Apr 2026 – Present

Network & Infrastructure Engineer

- Managed, configured, and maintained core networking environments, including **VLANs**, virtual switching, and public IP allocations sourced from ISPs.
- Administered core routing and switching hardware utilizing **MikroTik routers and enterprise switches**, ensuring high availability and reliability.
- Performed comprehensive infrastructure troubleshooting, **root-cause analysis**, performance optimization, and hardware upgrades across site systems.
- Centralized and maintained large-scale site-wide audio-visual systems, remote OTA access, IP endpoints, and network-managed displays.
- Implemented monitoring strategies and managed network traffic performance to ensure continuous business operations.

ACHIEVEMENTS

Courses

- *Computer Communications and Networks* (CSE204)
- *Computer Architecture and Organisation* (CSE205)
- *Operating Systems* (CSE302)
- *Principles of Computer Systems* (CSE103)

- *Intro to Digital Logic and Electronics* (CSE104)
- *Principles of Database Systems* (CSE206)

Annual Binomial Acumen

1st Place Winner

Probability and Statistics

1st Place winner

Certificate For Robotics Course

Learned Robotics with Dr. Ibrahim Hamarash at UKH

PROJECTS

RaspberryPi MPICH Cluster (Thesis)

A distributed computing project using a hybrid cluster of Raspberry Pi 5 and three 3B+ devices with MPI (mpi4py). Includes benchmarking tools for matrix multiplication and image processing, as well as implementations for stress testing.

Kurdistan Gaming Festival Platform ([gaming.krd](#))

Developed the production platform for the First Edition of the Kurdistan Gaming Festival, featuring secure administrative panels, centralized database setups, and robust backend endpoints.

Govand Baban Firm Website ([Link](#))

A professional and modern business website built for the Govand Baban firm, designed to present company services, background, and contact information channels in a clean and accessible layout.

AI Cat vs Dog Classifier

A deep learning image classification system using a Convolutional Neural Network to distinguish between cats and dogs. The project includes a full-featured GUI for training, and evaluation, with real-time metric visualization.

SoulFood

A multilingual recipe-sharing web application. It supports English, Kurdish, and Arabic. Designed with a vibrant and responsive UI.

Electricity Saver App

A mobile app developed in flutter focused on electricity consumption awareness and savings in real time. The app helps users log appliance usage, receive energy saving tips, and set daily reminders.

EasyQ - Online Quiz Platform

A web-based Multiple-Choice Question (MCQ) quiz platform that enables teachers to create quizzes easily and provides students with instant feedback. Designed to simplify testing processes and enhance interactivity in education.

Dinar Suika Game ([Github Link](#))

A Unity puzzle game inspired by Suika but using Iraqi Dinar coins instead of fruits. Implements physics-driven object merging and realistic collisions to create an engaging and culturally relevant gaming experience.
